**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Silverman et al. (U. S. PAT. 6,370,603).

In claim 1, Silverman et al. teaches all claimed features in Fig. 3, a programmable logic device, comprising: transceivers (314); programmable circuitry (316) coupled to the transceivers; and memory coupled to the transceivers (306 via 312); the programmable circuitry configured to receive a frequency locked signal (310) from at least one of the transceivers and to establish a data rate (data reception and transmission rates) responsive to the frequency locked signal; and the programmable circuitry programmed to send and receive session information to and from the transceivers to establish a communication session (col. 6, line 5; for the user to program for their specific protocol or other implementation); and wherein transceiver attributes are stored in the memory (306), the transceiver attributes for a plurality of communication protocols (protocols such as USB and Ethernet).

3. Claims 2, 4 and 6-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 10-24 appear to comprise allowable subject matter.

***Response to Arguments***

Claim 1 has been amended to include the limitation of claim 5. However, original claim 5 was objected by error and should have been rejected because it essentially comprises the same limitation as rejected claim 3.

Therefore, the reference of Silverman et al. anticipates all claimed features of amended claim 1, as discussed above.
